- Supports Apple DRM protection.
- Device mirroring for iOS.
- Each room separated virtually on the network.
- Monetise bandwidth utilisation.
- Works with any HDMI equipped TV*

* Compatible Wi-Fi infrastructure required.

Apple TV in-room entertainment

Hotels are reporting a decline in use of expensive VOD services but an increase in Internet usage. More and more guests are travelling with their own portable devices holding their rich-media content, like movies, games and music.

The Apple TV is small in size but big on entertainment, adding an extra dimension to regular TV viewing. Giving guests access to their personal iTunes Store media including movies, TV shows (where available), photos and music libraries. Access to the content they carry on iPhones, iPods and iPads. Even iTunes content stored on Windows machines. Plus with over 2 million users, many guests will already be familiar with the numerous features Apple TV offers.

Add value to your existing TV solution by allowing your guests to stream their own content from their portable devices.

iOS and Android device mirroring

Wirelessly display your apps, music and video on the hotel TV.

Works alongside existing coax/iPTV TV delivery.

No need to change TV subscriptions.

Conference room mode

Supports AirPlay and iCloud content streaming.

Unique

The only streaming solution to support Apple DRM protection natively, allowing your guests to play iTunes rented/purchased content on the hotel TV.
