

Key Benefits

- Fully customised login screen
- Full Mac OS X experience
- Charge your iPhone / iPad
- On customer logout the Mac restarts automatically and erases all the previous user's history.
- Every user starts with a fresh Mac configured to the hotel's specifications

Business Center Kiosk

Designed as the ultimate computing tool, Macs can be used for both business and pleasure and your guests will have the complete range of functionality offered by Apple at their fingertips.

Create a business center that will portray your establishment as embodying the best in modern technology. The latest Apple Mac computers and software will have the ultimate appeal to your guests whether they want to create, save, print and send documents, use the Internet, webmail, Skype colleagues and family or simply upload photographs from their travels.

The Business Center Kiosk software is installed on the Mac alongside the Mac OS X operating system. Enabling each guest to be greeted with a fully-branded login screen with a simple user-focused design.

From here, the user can choose to:

- Access the Internet (you could specify web bookmarks for local attractions, flight departures, local restaurants)
- Use Microsoft Office
- Run Mac OS X or Windows through virtualisation
- Play with the iLife suite of applications (iTunes, iPhoto for photo editing, iMovie for video editing, GarageBand, iWeb all come included on any new Mac)
- Print
- Play games
- Charge their iPhone / iPod through one of the USB ports

Best of all, every user can live safe in the knowledge that all their data is safe as each time they log out, all of their data is erased from the hard disk. That includes all files, web cookies, passwords and internet browser history.

This means every new user is greeted with the same Mac - clean of other's data, safe and ready for them to use.
